GR Series
Between Bearing, External Herringbone Gear Pump

Smooth, Efficient Handling of Viscous Liquids

GR Series between bearing, herringbone gear pumps have long been workhorses within a multitude of industrial markets due to their dependability, efficiency and low total life cycle cost. GR Series pumps provide high-efficiency, pulse-free pumping, even under the most challenging conditions. They are designed to handle viscous fluids across a broad spectrum of flows and pressures.

GR Series pumps are available in two basic gear widths and with multiple options. With a modular design, GR Series pumps can be customized to satisfy a wide range of applications.

Applications
- Oil circulation
- Process industries
- OEM
- Filtration equipment
- Fire foam systems
- Petrochemical blending and transfer
- Food and beverage processing
- Asphalt and tars
- Grease

Features and Benefits
Two-Piece Doweled Construction on each side of the body ensures accurate alignment and facilitates maintenance by allowing faster access to pump internals without disturbing piping.

Full Hydraulic Balance due to herringbone gears with dual stuffing boxes eliminates the need for specialized balancing devices or thrust bearings.

Between Bearing Gear Design minimizes shaft deflection and reduces bearing loads. High-pressure and high-speed capabilities are improved, extending pump life, improving reliability and lowering total life cycle costs.

Convertible Stuffing Box allows for greater flexibility in the use of packing or mechanical seals.

Large, Unobstructed Suction and Discharge passages keep entrance losses and turbulence to a minimum.

High-Capacity Double Row Roller Bearings are standard for long life.

Carbon Sleeve Bushings may be used when handling liquids with poor lubricity or low viscosities. Also available in antimony impregnated carbon for high-temperature applications.

Shafts are fine-grain, hot rolled medium carbon steel and are generously sized to minimize deflection.

Experience In Motion
GR Series
Between Bearing, External Herringbone Gear Pump

Operating Parameters
- Flows to 275 m³/h (1200 gpm)
- Pressures to 35 bar (500 psi)
- Temperatures to 350°C (650°F)
- Viscosities to 33 000 cps (1 million ssu)
- Speeds to 1800 rpm
- Standard sizes from 40 mm to 200 mm (1.5 in to 8 in)

Available Options
- Inboard bearing with mechanical seal for V-belt drive
- Jacketed pump body
- Integral safety relief valve (up to 3GR size)
- Mechanical seals (various materials available)
- Jacketed stuffing box
- Dual stuffing boxes with packing or mechanical seals
- INSUROCK® low-friction wearplates
